

Endless felt belt

Material: polyester, nomex, wool
Color: white, yellow
Thickness: 10mm or customized
Temperature: up to 300C
Package: woven bag

Felt belt is also called Seamless Felt Belt, no joints endless Felt belt. It is made of special high quality raw material 100% Nomex, 100% wool, Nomex+Polyester, wool+ polyester etc.the heat resistant could be 280c degree.

Nomex felt belt is mainly used for various heat transfer machines, banners, etc., working temperature 180-260 °C, can be customized according to different production requirements, through a special technical processing, the perfect solution to the conventional thermal transfer blanket running Partial, bulging, creases and other issues during printing, we have perfect after-sales service, a strong technical team escort your quality.

Endless Wool Felt belts are consistently chosen for croissant and long bread production. Commonly used on equipment made by OEM's like: Ideal, Loks, CIM, Rondo, Fortuna, Bertrand, and Comas. Our Endless wool Felt belts can be produced in almost any width, length or thickness. Most common thickness runs between 2-4mm.

Features:

Select brand raw material,common specifications have temperature 16-180°C and 230-260°C.

The felt belt contains heat shrinkable fiber material inside,the felt will automatically shrink after heating,wrapped tightly.

The belt surface formation,uniform density,good resistance,long work life.

Application:

It is mainly used in textile machine, leather-process machinery, heat transfer printing machine, drying machinery, cold-rolling mill, hot-rolling mill, and paper making equipment, fitness equipment, metal processing equipment and various areas.
